

Put whole fish or bones, gills and guts, scales, tails etc. Washed, crushed live snail or kuhol (eggs can also be used) place in a plastic container. Pestle or crush materials Don't use hands. Add the same amount of molasses or Muscovado sugar. Mix sugar in ¼ container with fish ingredients then remaining molasses. Prepare at night to prevent flies from breeding.

Cover and keep in a cool place or shaded area. Drain to extract liquid after 10 to 15 days. Transfer liquid into a clean plastic bottles Wait till tiny bubbles disappear before sealing the cover before storing. Always leave about ¾ of bottle empty so IMO can breath.

Fish Amino Acid (FAA)

Make nitrate from fish it contains abundant amount of nutrients and various types of amino acid.

APPLICATION: FAA / CALPHOS / CALCIUM

Apply using 2 tbsp / 1 liters of water. Apply directly to the soil or to the ground, not to the leaves.

Keep concoction from direct sunlight. Store in dry cool place.

Calcium Phosphate Ca-P(animal bone)

Induced flowering, prevent overgrowth. For older plants, it Increase calcium factor on roots and leaves. Calcium Phosphate (Ca-P) is the product which according to the plants' lifecycle and can be fast-effective. Ca-P is applied when the plants are about to flower. Feed to animals during pregnancy or breeding time at 200 times dilution. Spray when first flowers comes out. ex: tomato plant , cucumber, eggplant etc.

1

Boil or broil 2 kilos of animal bones to separate meat and fat until remaining meat to the bone is charcoal black scrape charred meat and let it cool. Do not burn the bone. Ratio 1:10

2

Place bone in a plastic container and pour 5 gallons of pure coconut or sugarcane vinegar. Cover for 30 days. Filter and used. Keep air tight container.

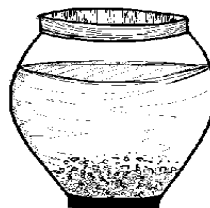

Calcium (eggshell and shells)

Strengthen Flowers. Contributes to better utilization of carbohydrates and protein. It is also a major element in forming a cell membrane and enables smooth cell division make fruit hard and sweet. Spray CA on the leaves after the fruits has become large. They prevent overgrowth and get a sweet hard fruit. Add seawater, calcium phosphate or OHN for better taste and aroma of the fruits. It is applied when nitrogen is big. It is the most important ingredients for flowering.

1

Wash and crushed eggshell and take the inside filament or film. Pan fry 2 kilos eggshell until brown, set aside and cool. **Vinegar** first then pour slowly the eggshells.

1

Wait till the tiny bubbles disappear and stop. Use exact container. Cover and ferment for 20 days. Filter and use keep in airtight container..
